Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to a nucleic acid encoding a hypersensitive response eliciting protein of SEQ ID NO:2 and host cells and plants transformed with that nucleic acid, classified in class 536, subclass 23.7, for example.
- II. Claims 29-31, drawn to a method of imparting disease resistance, classified in class 800, subclass 279, for example.
- III. Claims 32-34, drawn to a method of enhancing plant growth, classified in class 800, subclass 290, for example.
- .IV. Claims 35-37, drawn to a method of insect control, classified in class 800, subclass 302, for example.

The inventions are distinct, each from the other because:

Inventions II-IV are unrelated to each other. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions and different effects. The method of invention II requires methods of assaying for disease resistance, the method of invention III requires assays for plant growth, and the method of invention IV requires assays for insect resistance, each not required by the other inventions.

Invention I is related to inventions II-IV as product and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the

Art Unit: 1638

product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the plants of invention I can be used in any of the three processes of use of inventions II-IV and thus, its use is not limited to any one of those processes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, fields of search, and classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

If Applicant elects one of inventions II-IV, Applicant may elect to have invention I examined as well.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
